React 19 RC Upgrade Guide

April 25, 2024 by [Ricky Hanlon](#)

The improvements added to React 19 RC require some breaking changes, but we've worked to make the upgrade as smooth as possible, and we don't expect the changes to impact most apps.

Note

React 18.3 has also been published

To help make the upgrade to React 19 easier, we've published a `react@18.3` release that is identical to 18.2 but adds warnings for deprecated APIs and other changes that are needed for React 19.

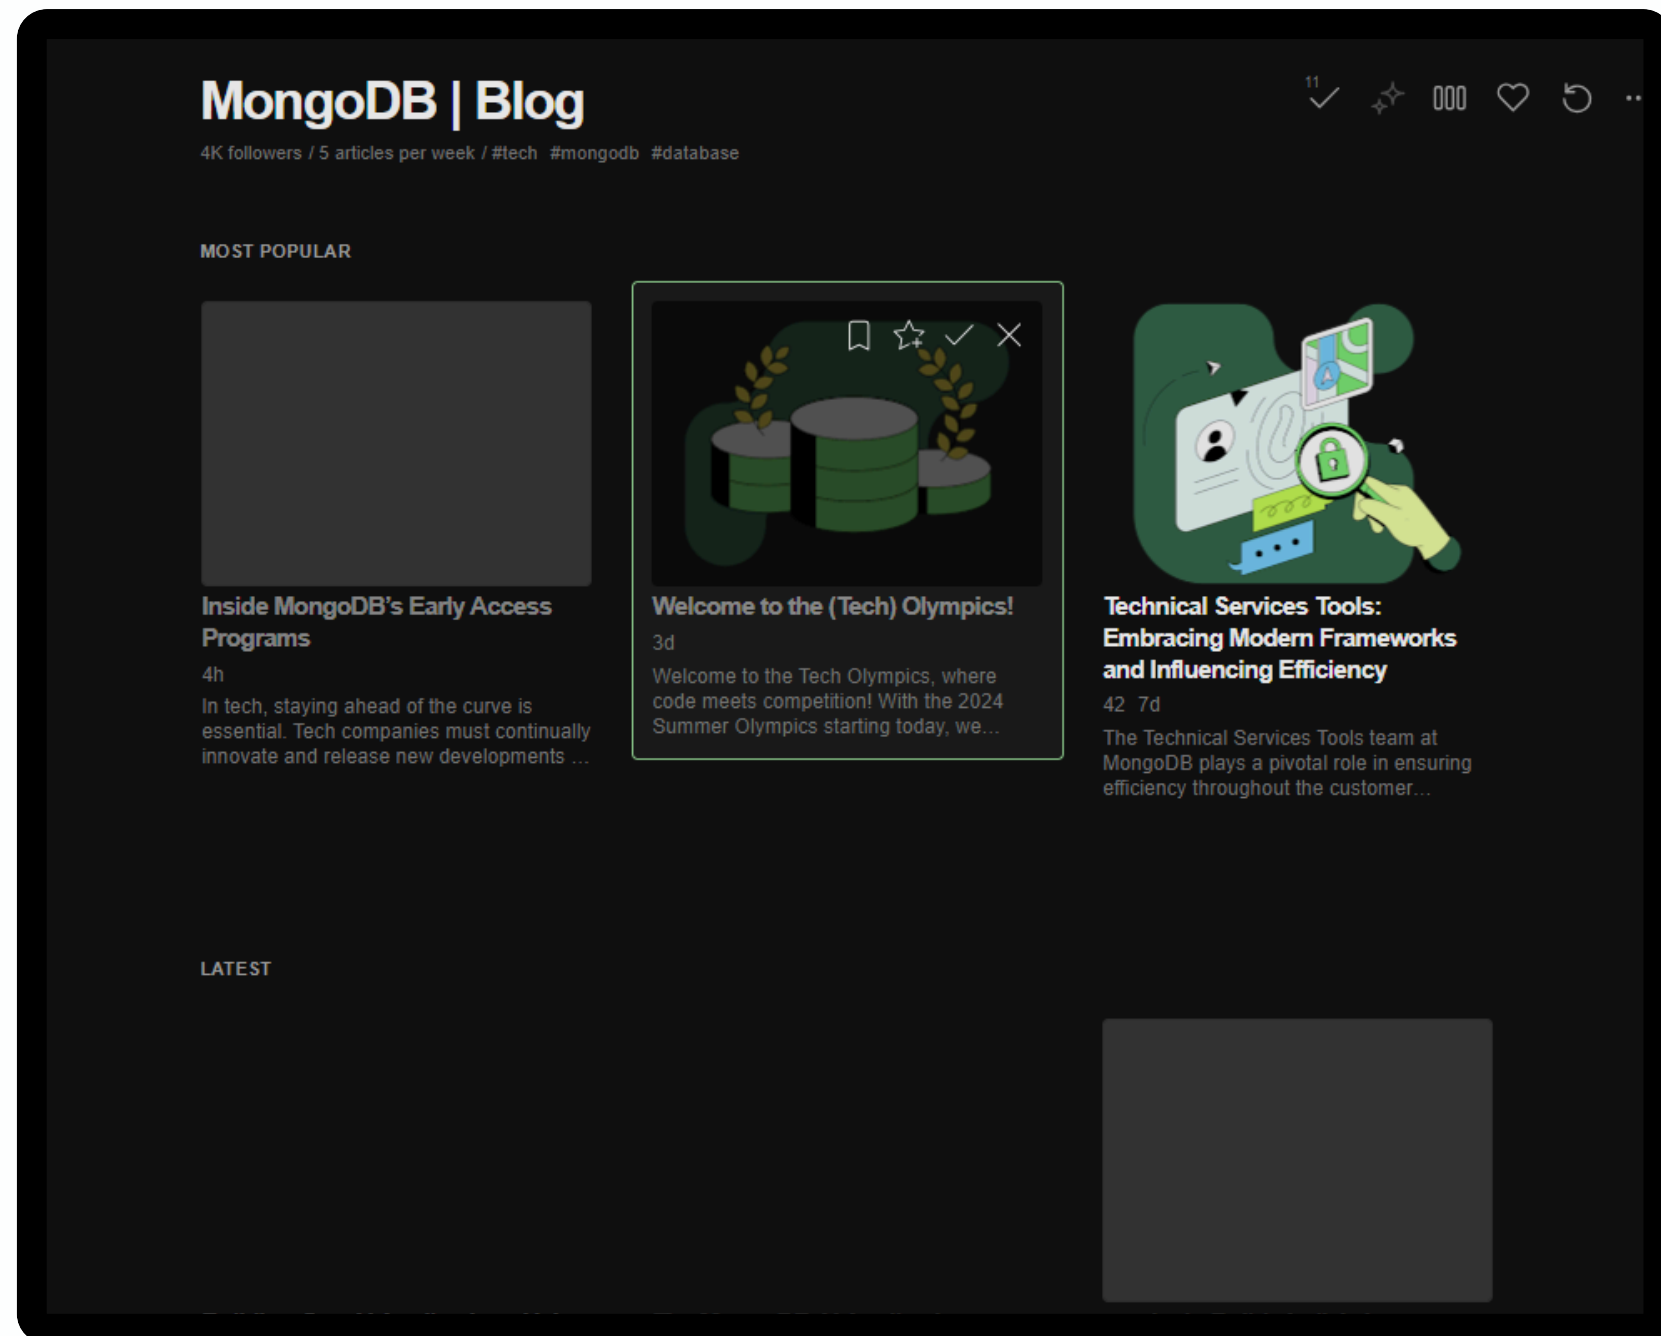

We recommend upgrading to React 18.3 first to help identify any issues before upgrading to React 19.

For a list of changes in 18.3 see the [Release Notes](#).

In this post, we will guide you through the steps for upgrading to React 19:

- [Installing](#)
- [Codemods](#)

Welcome to the Tech Olympics 🏆, where code meets competition! With the 2024 Summer Olympics starting today, we thought it'd be fun to imagine developers as athletes, showcasing their skills in a series of thrilling events.

From relay races to coding challenges, the Tech Olympics would bring together the brightest minds in tech for a competition like no other. Whether you're a coding wizard, a bug-squashing maestro, or an AI aficionado, there would be something to test your limits and celebrate your talents.
